Subject: Pilgrim Nuclear Power Station's Water Quality Permint

Dear Mr. Papadopoulos,

I fully support the comments submitted by the Association to Preserve Cape Cod (APCC) concerning the NPDES draft permit for the Pilgrim Nuclear Power Station. I am very concerned that the draft NPDES permit violates the Clean Water Act.

I live 1.5 miles as the crow flies from the plant. It has violated so many rules; continues to have one equipment failure after the next and an owner who refuses to do what is best and safest for the public.

It is outrageous that our government, at all levels continues to put this company's interests before the public good.

If you and your family lived withing 1.5 miles of this failing plant, how might you feel? Squeezing 'more profit' out of the plant, while releasing more radioactive wastes into our environment are just not acceptable. They will never be acceptable.

Please assure that EPA puts the public first. The permit should not be issued. The plant must shut down, now.

Thanks you and please be a strong leader and public servant,
Cheryl Fischer
